## 1-Introduction:

In this system. we will show the most important functions in our system.

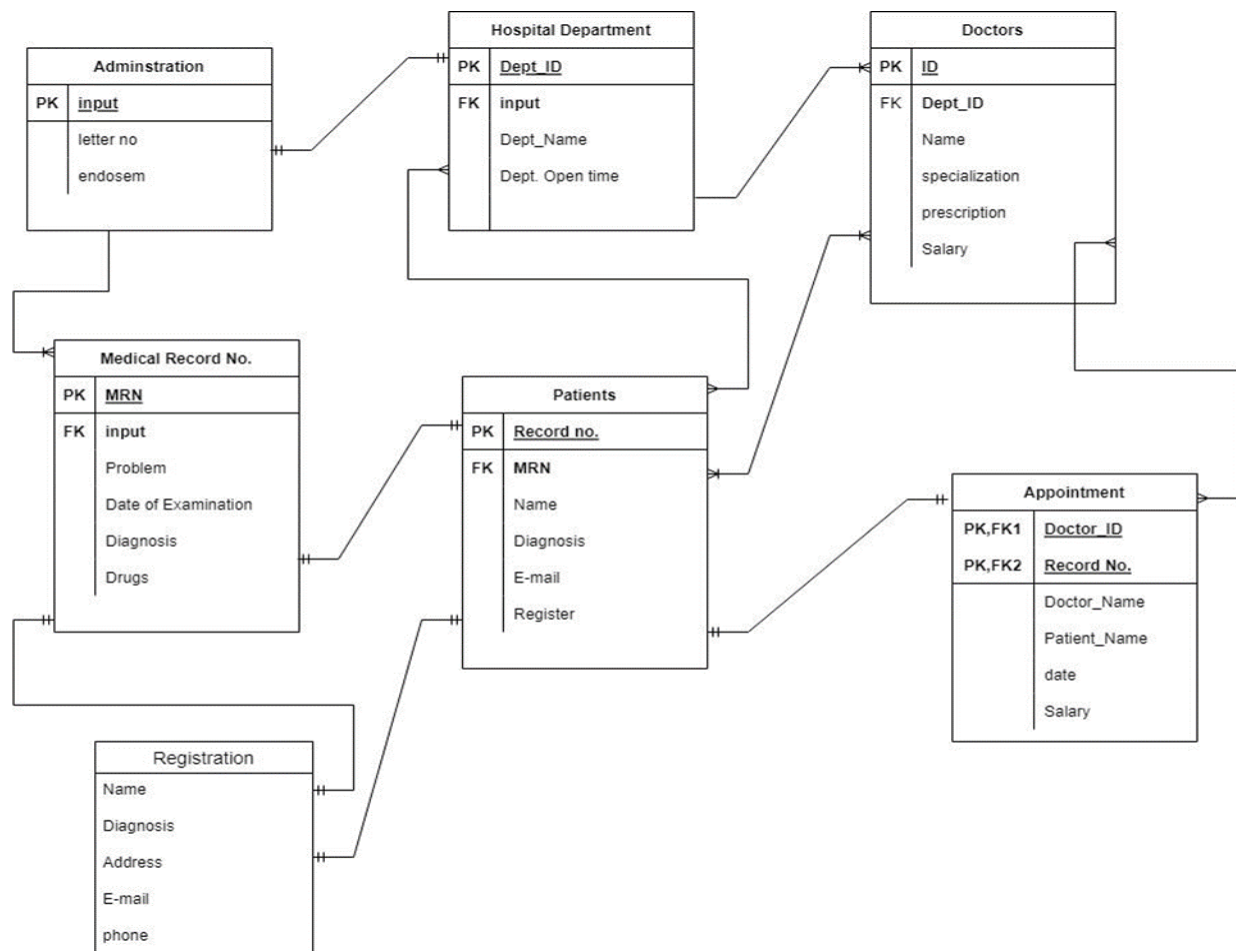

Hospital management system is a computer system that helps manage the information related to health care and aids in the job completion of health care providers effectively.

Our system is provided with many functions and features where patient registers first into system, then he sees if he will make an appointment or get in consultation with doctors.

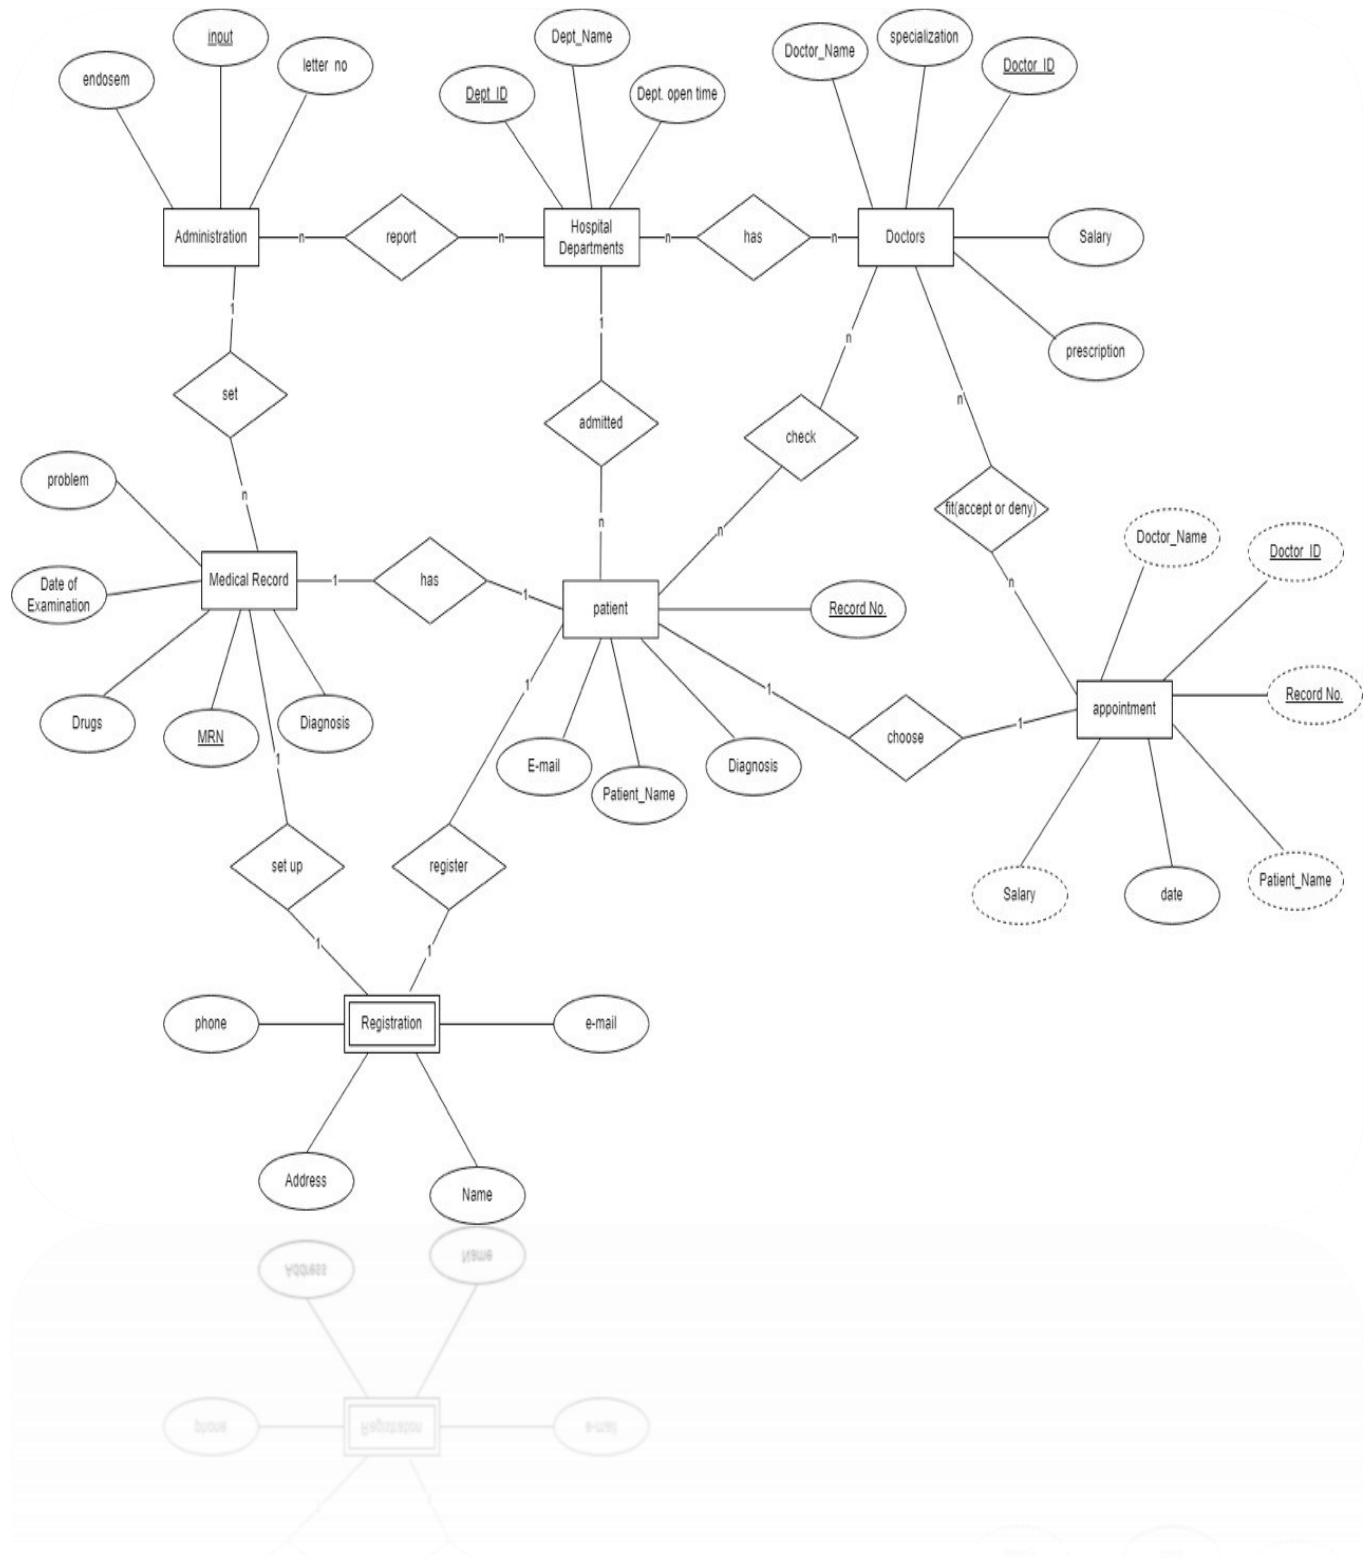

Also, patient can follow our hospital system latest news to be in knowledge with every new in our system.

### 3-Forms

#### 1-Log in form:

The screenshot shows a web browser window with the address bar displaying "127.0.0.1:8000/login". The page features a light blue background with a central white login form. Above the form is a blue circular logo with a white diagonal line. The form contains two input fields: "Email" and "Password". Below the "Password" field is a checkbox labeled "Remember me". At the bottom of the form is a "LOG IN" button. A link labeled "Forgot your password?" is positioned to the left of the button. In the bottom right corner of the page, there is a "Activate Windows" watermark with the text "Go to Settings to activate Windows."

- In login form: there are two fields which they are email and password.
- Where user enters his/her email and password and after that he /she clicks on login button to login as user to go to next operation.
- In this form also admin logs in to manage the operations in our system from: How many patients make an appointment or cancel it – Deleting or updating doctors -all doctors.

## 2-Register form:

127.0.0.1:8000/register

Update

Name

Email

phone

address

Password

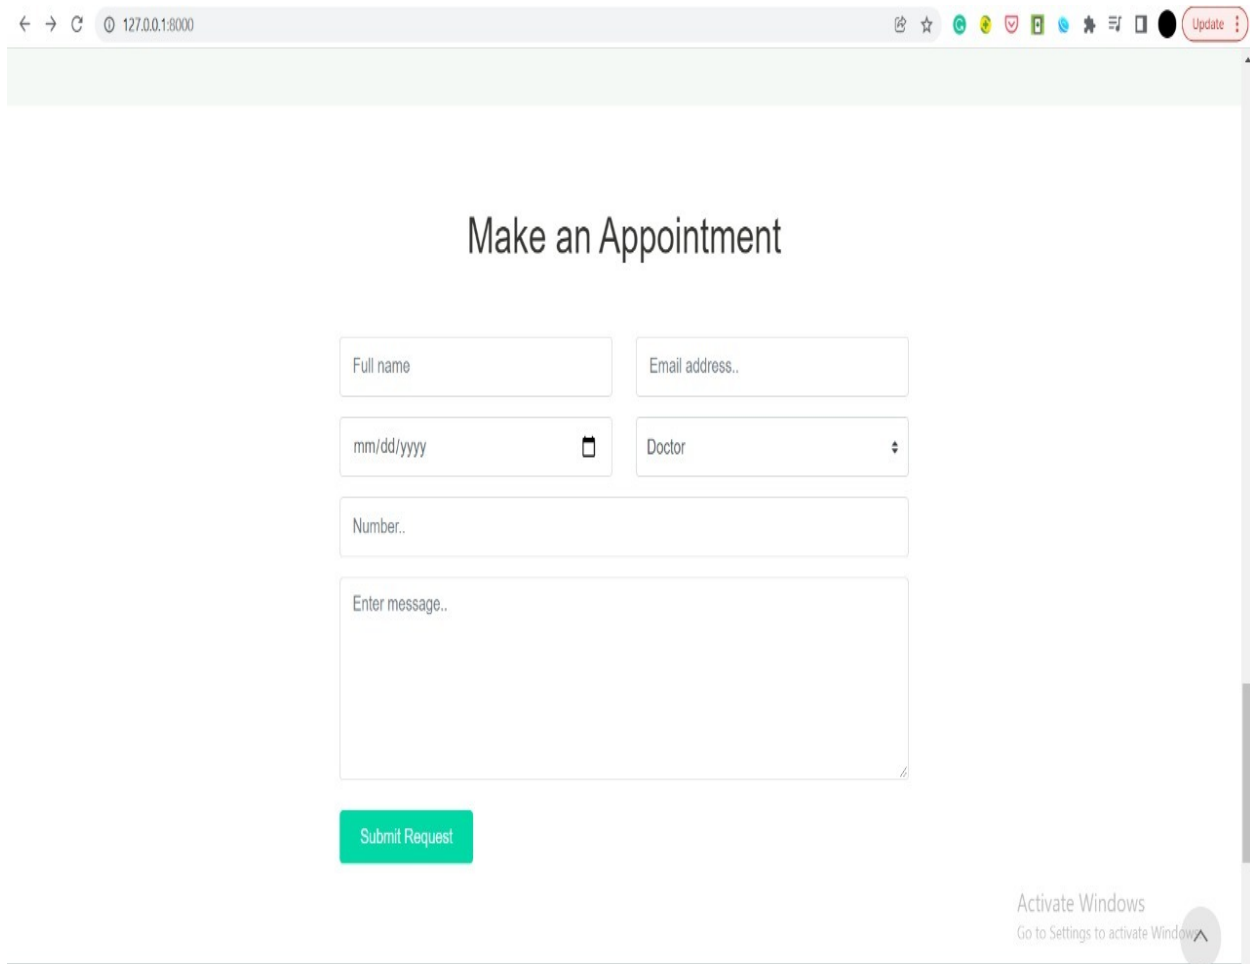

Confirm Password

[Already registered?](#) **REGISTER**

Activate Windows  
Go to Settings to activate Windows.

- In this form, there are four fields name, email, phone, password, confirm password.
- User registers in this form to go next to make appointment and do consultations with doctor.

### 3-Make an appointment form:

The screenshot shows a web browser window with the address bar displaying '127.0.0.1:8000'. The page title is 'Make an Appointment'. The form contains the following fields:

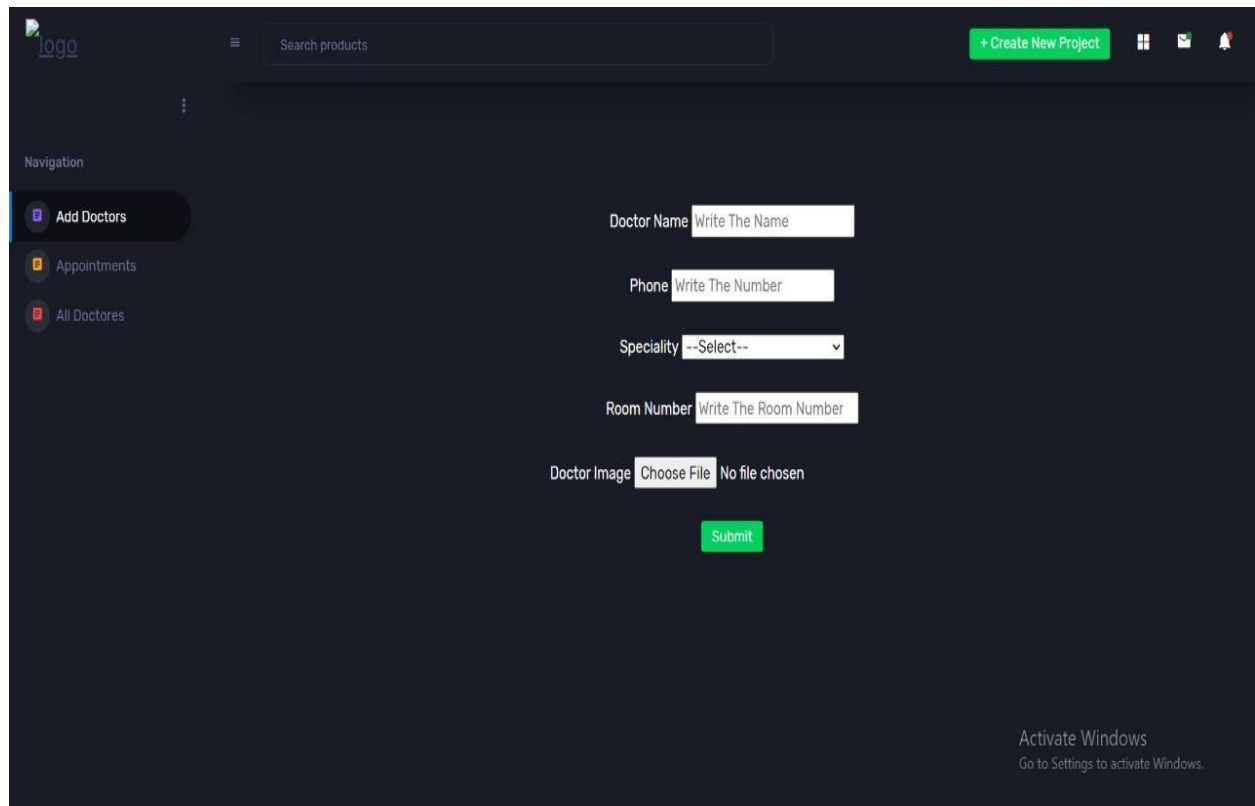

- Full name
- Email address..
- mm/dd/yyyy (with a calendar icon)
- Doctor (with a dropdown arrow)
- Number..
- Enter message.. (a large text area)
- Submit Request (a green button)

At the bottom right, there is a Windows watermark: 'Activate Windows Go to Settings to activate Windows'.

- In make an appointment form , user or patient enters his full name , email address and the date which he/she will make appointments with doctor and chooses the doctor name with his specialty and enters his/her number and then enters message if he/she had a problem with something . then submits his/her request.

## 4- Adding Doctors form:

The screenshot shows a web application interface with a dark theme. On the left is a sidebar with a 'Navigation' menu containing 'Add Doctors' (highlighted), 'Appointments', and 'All Doctors'. The top header has a logo, a search bar, and a '+ Create New Project' button. The main content area displays the 'Add Doctors' form with the following fields: 'Doctor Name' (text input), 'Phone' (text input), 'Speciality' (dropdown menu), 'Room Number' (text input), and 'Doctor Image' (file upload button). A green 'Submit' button is located below the form. An 'Activate Windows' watermark is visible in the bottom right corner.

## 5- Get in touch form:

### Get in Touch

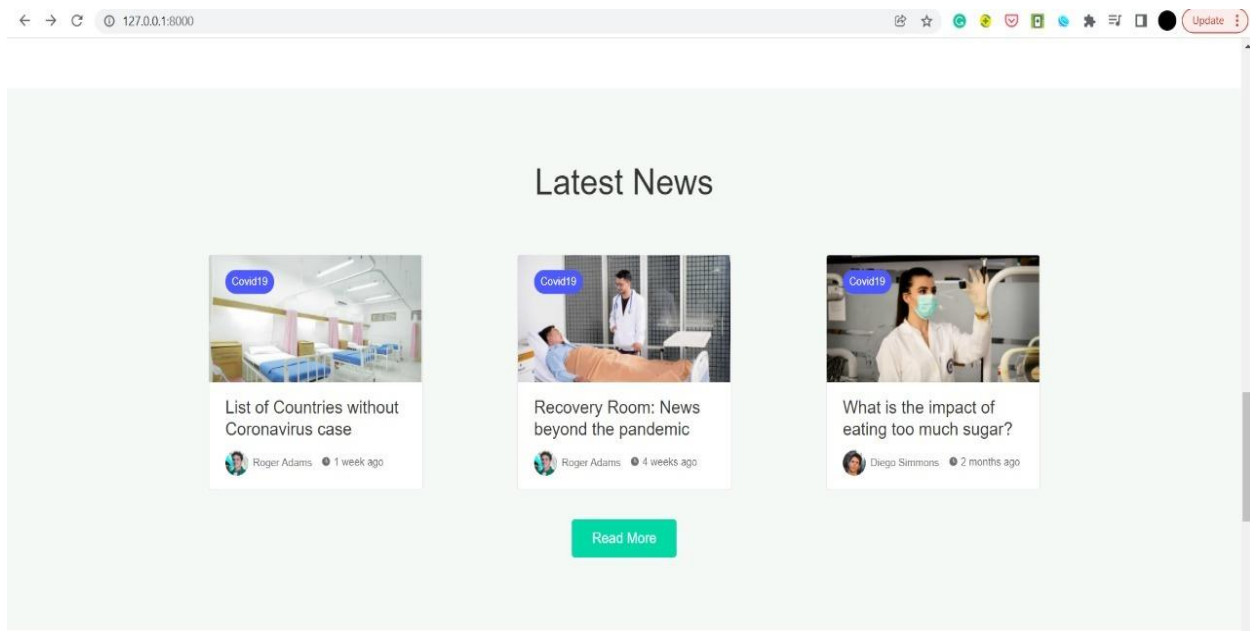

Name

Email

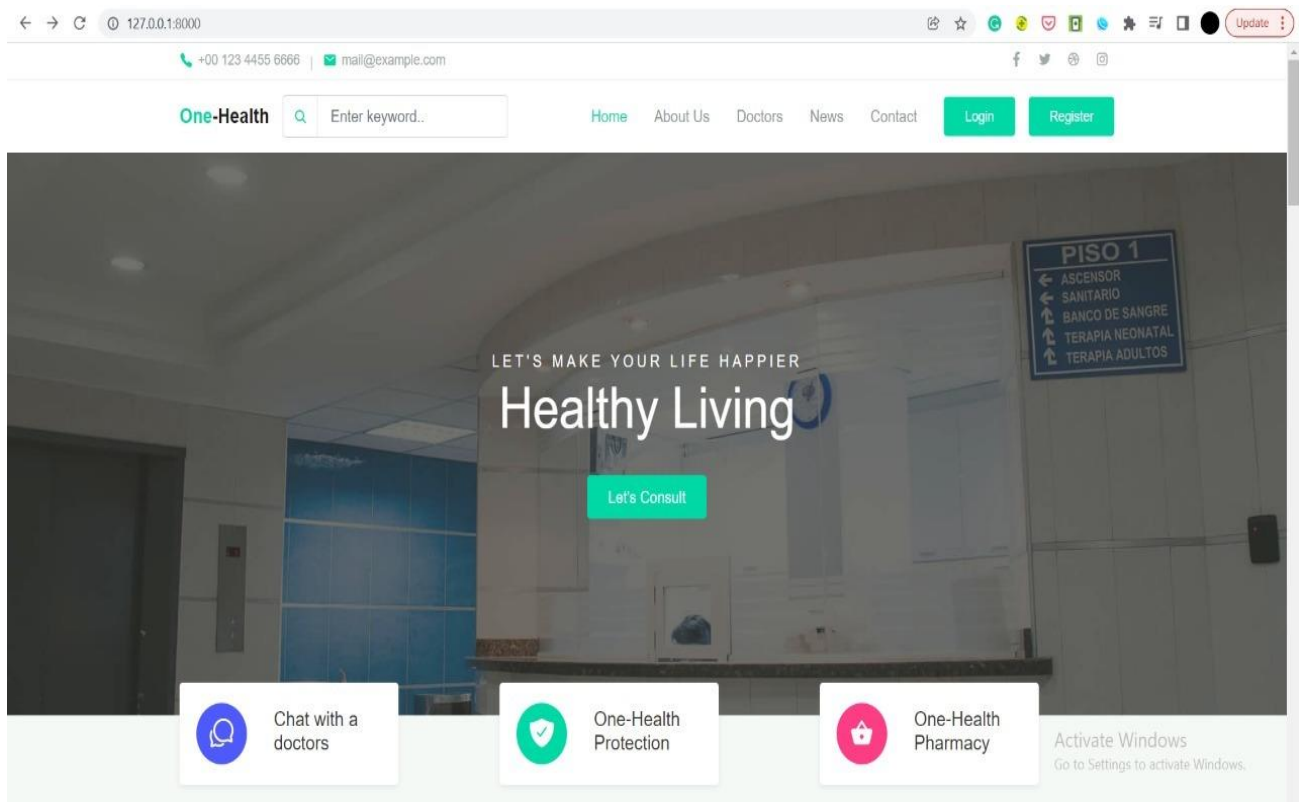

Subject

Message

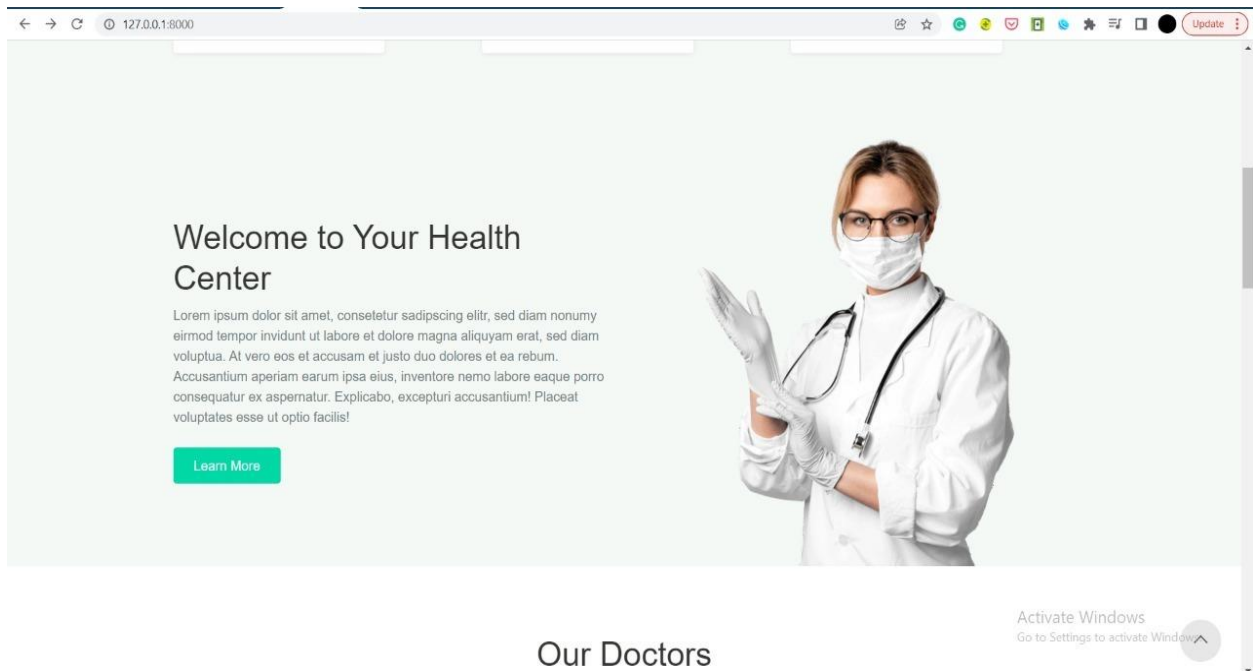

## 6-latest news in our hospital:

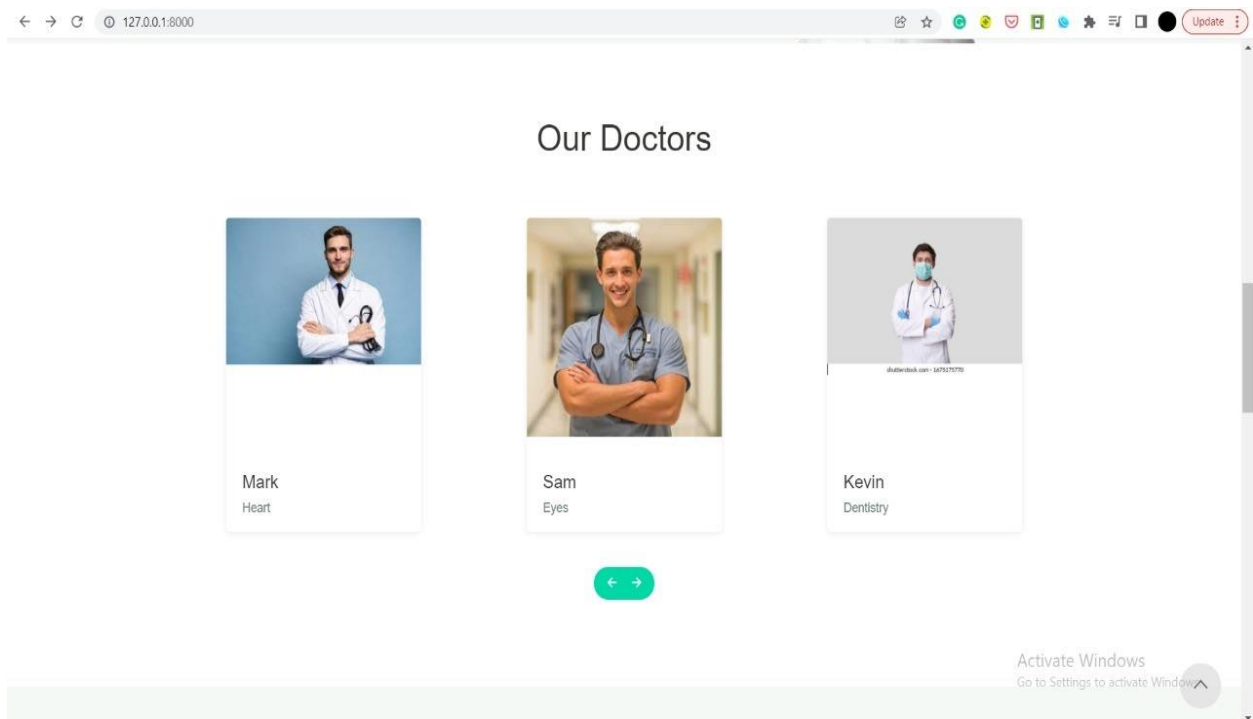

## 7- Our Hospital management system :

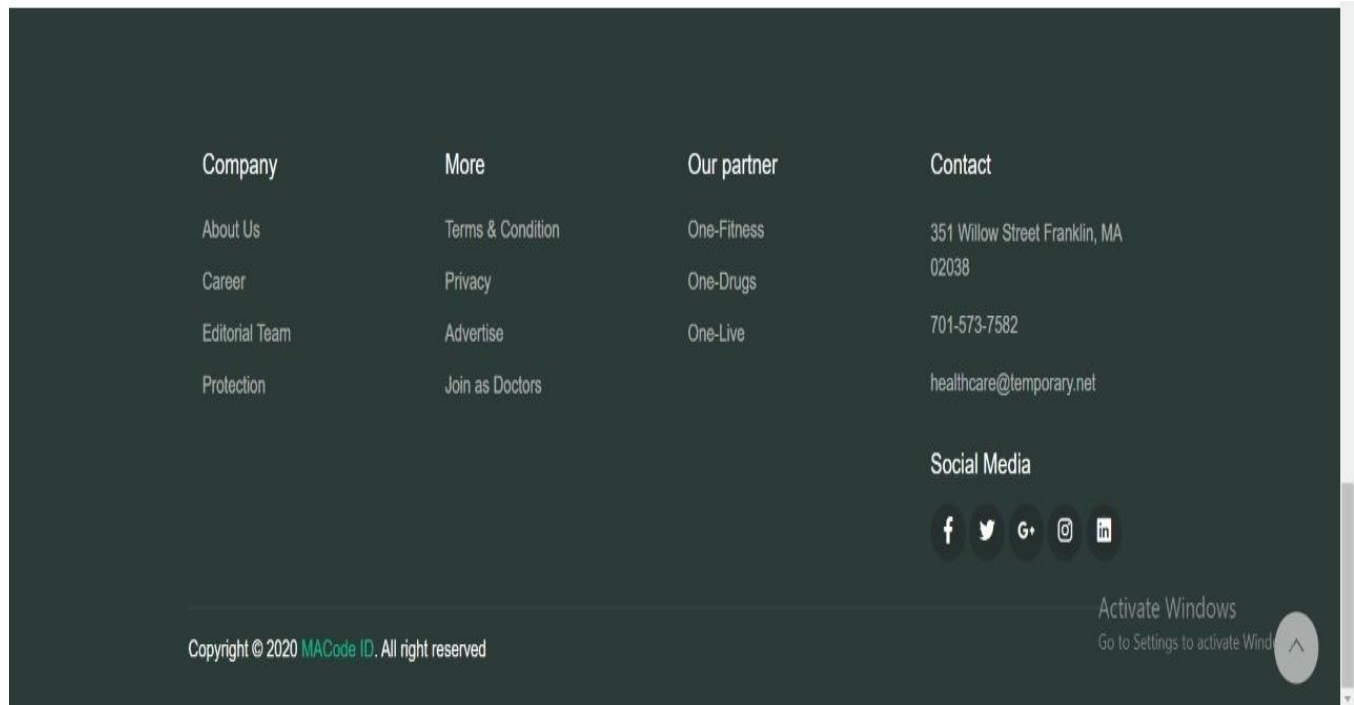

## 7-welcome to our health care center:

## 8- Doctors name and photo and their specialty:

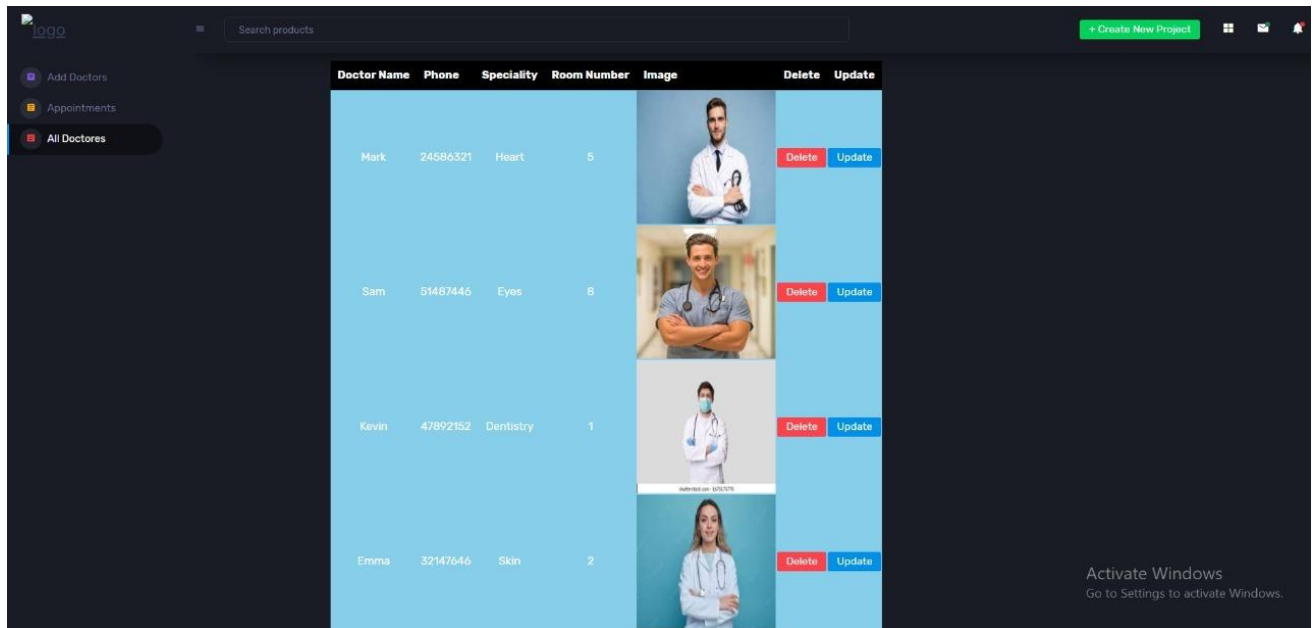

## 9- footer:

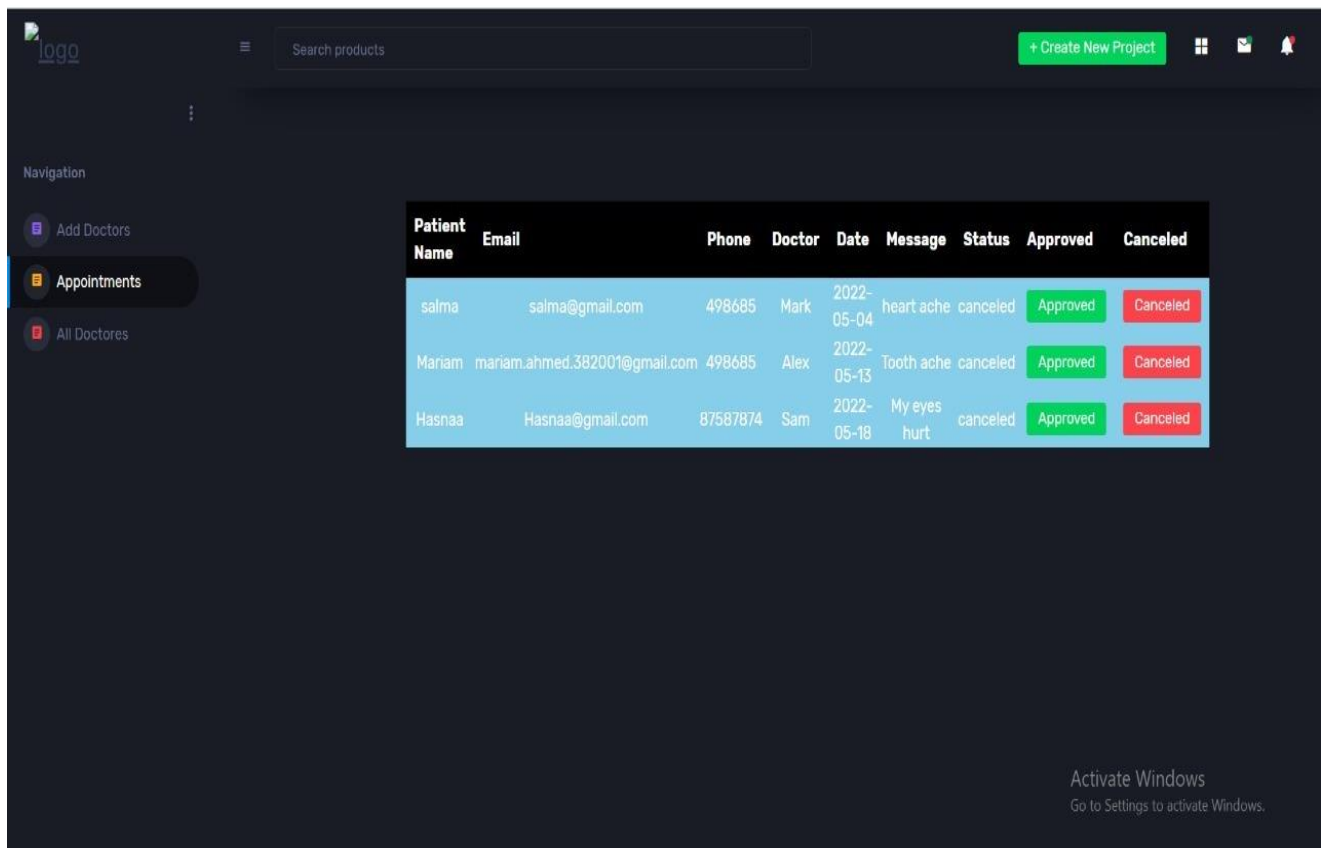

## 4-Reports:

Reports of our project will result from running of databases queries as shown in the images:

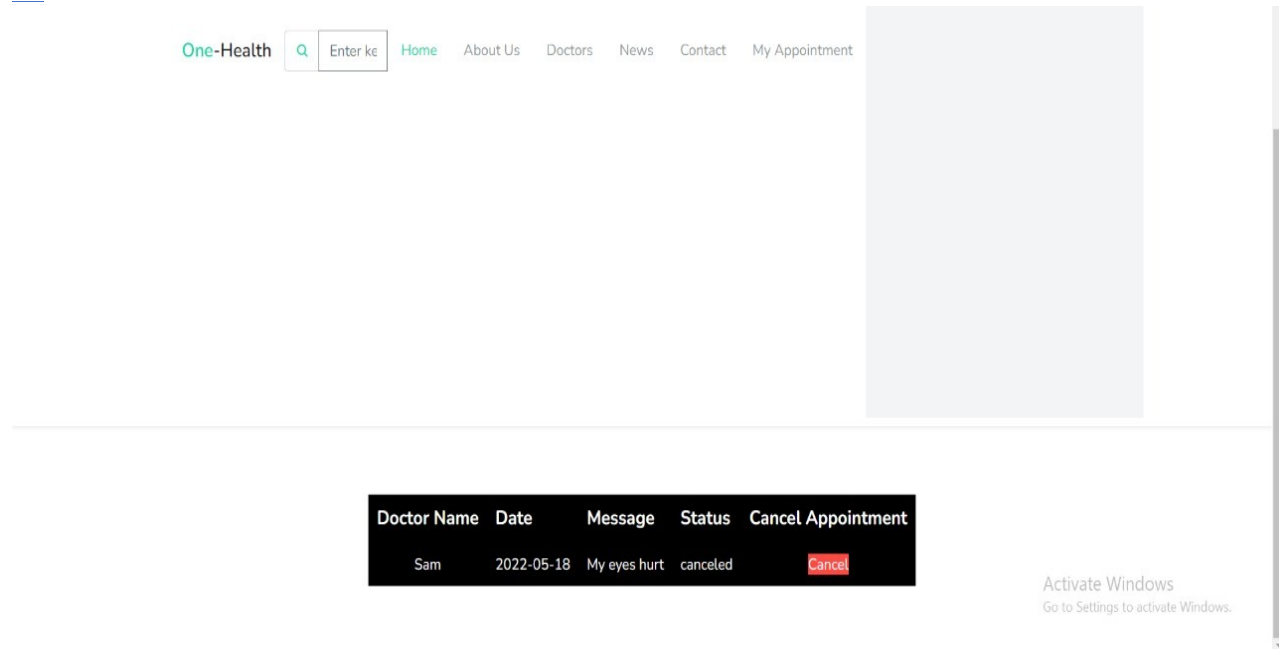

After adding doctors name in the database , that is the result that will be shown.

2-

After patient registered into form then the database shown will be in that result.

3-

The result of get in touch form with doctors , the result of this query as shown.

#### 4- System vision:

- To provide an integrated Solution for the Hospital, which Helps in Efficient Management of the Hospital? Enhance Patient Care  
Improve work efficiency Improve Fiscal Control Eliminate the chances of any Pilferage Enable the Growth of the Hospital.
- As to help patients to know dealing with computerized system.

## 5- System Capabilities

### Stakeholders

Admin: those individual/s which manage the system

patients: those individuals who use this system to make an appointments, get in touch with doctors

doctors: those who help patients.

### Activities of Stakeholders

Patients: register into system, make an appointment, get in consult with doctors, follow patient latest news

Admin: manage system operations, Add doctors, view appointments, generate reports, manage database

Doctors: help patients

Physical locations the system will be used: As hospital but computerized

### Technology

Internet Service Provider

Computers/Laptops

Visual studio code

Laravel php framework

Website/Browser Based: html, css, javascript ,bootstrap

Database design, mySQL, phpMyAdmin.

## 6-Non-Functional Requirements

Security: a secure portal login will ensure security for all stakeholders

Reliability: ensuring that software & hardware will perform the required tasks

Usability: the modified website interface and the internal database system designed to be user friendly and straightforward

Extensibility: the client has stated that the organisation will one day be handed over therefore the system will be built in a way that future growth can occur
